

About iLEAD Innovation Gardens

Welcome Immersive Learning Educators, Artists & Designers (iLEAD)

The iLEAD Innovation Gardens is the creative and applied dimension of the iLRN campus ecosystem — a vibrant space where design, practice, pedagogy, and innovation converge. As the home of the Immersive Learning Education and Design (iLEAD) Stream, the Gardens cultivate practitioner-led innovations in immersive learning across sectors, disciplines, and regions. Where the Knowledge Tree focuses on theory-building and research, the Innovation Gardens center on translating insights into action, enabling educators, designers, developers, and changemakers to prototype, implement, and refine immersive learning experiences. This is a space where real-world impact begins — rooted in evidence, enriched by community, and guided by human-centered design.

The iLRN Virtual Campus FrameVR space reflects the Gardens' spirit of creativity and growth, providing an environment suited to collaborative making, experimentation, and community-driven innovation.

[FrameVR space description/image to be added]

Community members are invited to share ideas, nominate initiatives, and participate in programming that bridges research and practice in immersive learning design. Discussions and community building continue through the dedicated club on the iLRN website.
