Traditional assessment models — standardized testing, proctored examinations, written assignments — are under pressure from multiple directions: AI-assisted completion, accessibility critiques, validity challenges, and the inadequacy of 2D assessment for 3D competency development. Immersive learning offers new assessment possibilities but also introduces new validity and equity challenges not yet resolved.

Key Drivers / Contributing Conditions:

- AI-assisted completion undermining existing assignment integrity
- Disability access critiques of standardized testing
- Lack of valid assessment frameworks for spatial and embodied competencies

Tensions Carried Forward to Part II:

- How should immersive assessment be validated when the competencies being assessed are themselves contested?
